EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

IN THE CLAIMS

Claims 1-10 and 17-19 have been cancelled.

This application is in condition for allowance except for the presence of claims 1-10 and 17-19 directed to inventions non-elected without traverse. Accordingly, claims 1-10 and 17-19 have been cancelled.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Claims 11-16 and 20-22 are allowable over the prior art of record because the prior art does not teach or suggest a method of forming a borohydride, comprising the steps of providing, mixing, exposing and precipitating and/or concentrating as presently claimed, esp., the step of mixing the source of borate with a fluid to form a substantially aqueous solution.

The prior art does not contain any language that teaches or suggests the above.

*Jeffers et al. do not each the step of mixing the source of sodium borate with a fluid to

Application/Control Number: 10/685,370

Art Unit: 1753

form a substantially aqueous solution. Therefore, a person skilled in the art would not have been motivated to adopt the above conditions, and a prima facie case of obviousness cannot be established.

Claim 23 is allowable over the prior art of record because the prior art does not teach or suggest a method of forming sodium borohydride, comprising the steps of providing, mixing, exposing and precipitating and/or concentrating as presently claimed, esp., the steps of mixing the source of sodium borate with a fluid to form a substantially aqueous solution and exposing the solution of sodium borate and the fluid to an amount of ionizing radiation derived from a nuclear radiation source to facilitate the formation of sodium borohydride.

The prior art does not contain any language that teaches or suggests the above.

Jeffers et al. do not each the steps of mixing the source of sodium borate with a fluid to form a substantially aqueous solution and exposing the solution of sodium borate and the fluid to an amount of ionizing radiation derived from a nuclear radiation source to facilitate the formation of sodium borohydride. Therefore, a person skilled in the art would not have been motivated to adopt the above conditions, and a prima facie case of obviousness cannot be established.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on
